

# Frontend Software Engineer

A technology and entertainment company by the beach! Sound too good to be true? DECA is just that: a fun, young company -- located by the beach in Santa Monica -- and we're hiring engineers who are passionate about technology.

As a 5-year-old company, DECA provides the security of an established business. As an innovator in the infancy of the online video market, DECA also offers the excitement and ownership of a startup.

DECA is currently looking for software engineers who are passionate about technology/coding and building products. If you try new technologies or code as a pet project on the weekend, DECA is the place for you.

We are looking for talented Java engineers who enjoy having ownership of their work and seeing their products impact a large user community and our company. At DECA's core is a fun start-up environment and boundless entrepreneurial gusto but with the added advantage of being a stable and established company. If you are a highly-skilled, team-oriented Java developer who has a great attitude, excellent communication skills and is ready to take on big challenges in the video distribution industry, read on!

## Company Summary

You've heard it all before: online video is the future of the Web. In fact, it's been estimated that online video consumption will surpass broadcast TV in the US by 2020. While that's a staggering statistic, web video is clearly still in its infancy, which makes it a great time to get on board and help shape the future of this booming business. Sound interesting? Then you'll be excited to know that DECA has already been working hard in this industry, paving the way to successful video distribution. So, who are we exactly?

DECA is the premier lifestyle digital media company. We deliver premium online video to an engaged audience through a portfolio of owned and operated sites and a scaled online video network. It is the first video distribution network targeted at the female audience. Our video programming comes from a wide variety of content providers including leading cable companies, magazine publishers and independent producers. The service went live in October 2010 and we've been scaling rapidly and expanding our business ever since.

Led by ex-Google, ex-Yahoo and ex-eBay executives, the team is now growing and looking for an ambitious and qualified Java engineer who can help build the next phase of our product. If you are passionate about online video, content curation and cutting-edge technology, we want to hear from you! This is your opportunity to join a talented and close-knit team that will provide you with tremendous growth potential, as well as the chance to make major impacts on our products and services.

This is a full-time, permanent position offering competitive salary, full benefits, stock options, stability, growth and much more!

## Job Qualifications
